Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless --

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1-4 are rejected under 35 U.S.C. 102(b) as being anticipated by Nanjyo (US PG-PUB 20030068164).

[Claims 1 and 3]

Nanjyo teaches a camera apparatus (figure 1) that controls the amount of light with a property device (barrier filter BA) that is capable of controlling light transmissivity, comprising: an optical device (exciter filter EX) that blocks light having a wavelength longer than a predetermined wavelength in a visible light region (See figure 3, Paragraph 20); and the property device (BA) that is disposed on the same optical axis as the optical device and that is capable of controlling the light transmissivity (Paragraph 24 teaches barrier filter has a wavelength selecting property longer than 520 nm), image capturing means for capturing light that is emitted from an object through the optical device and the property device (Paragraph 24)

[Claims 2 and 4]

Nanjyo teaches that the predetermined wavelength corresponds to a wavelength at which a wavelength region of which wavelength dependency of spectrum characteristic of the property device is weak changes to a wavelength region of which wavelength dependency of spectrum characteristic of the property device is strong (Figures 3, 4 and Paragraphs 20 and 24 teach that optical device EX transmits during 450 nm to 520 nm during which exciter filter EX has a

spectrum characteristic that is weak and changes to a wavelength region of which wavelength dependency of spectrum characteristic of the property device is strong i.e. only transmits above 520 nm).
